

**CLAIM AMENDMENTS:**

1. (Currently Amended) A drapery lining comprising, in combination:
  - a metalized film having a first side and a second side;
  - a first layer of acrylic latex having a first side and a second side, said second side of said first layer of acrylic latex is coated to said first side of said metalized film; and
  - a second layer of acrylic latex having a first side and a second side, said first side of said second layer of acrylic latex is coated to said second side of said metalized film, said combination of said metalized film, said first layer of acrylic latex and said second layer of acrylic latex providing a blackout and thermal drapery lining; and
  - a drapery fabric coupled to said first side of said first layer of acrylic latex.
2. (Previously Presented) The drapery lining of Claim 1 wherein said first side of said first layer of acrylic latex is flocked.
3. (Previously Presented) The drapery lining of Claim 1 wherein said second side of said second layer of acrylic latex is flocked.
4. (Previously Presented) The drapery lining of Claim 1 wherein said first side of said first layer of acrylic latex is flame retardant.
5. (Previously Presented) The drapery lining of Claim 1 wherein said second side of said second layer of acrylic latex is flame retardant.
6. (Previously Presented) The drapery lining of Claim 1 wherein said film is metalized with aluminum.

AMENDMENT

- 2 -

7. (Previously Presented) The drapery lining of Claim 6 wherein said aluminum has an optical rating of between 1.5 and 4.0.

8. (Currently Amended) The drapery lining of Claim 1 wherein said ~~metalized~~ film is metalized with a metal having a thickness of between .0002 to .03 millimeters.

9. (Previously Presented) The drapery lining of Claim 1 wherein said film is polypropylene.

Claims 10-18 (Cancelled)

19. (Currently Amended) The drapery of Claim ~~[[18]]~~ 33 wherein said light impermeable metalized film is metalized with aluminum.

20. (Currently Amended) The drapery of Claim 19 wherein said aluminum has an optical rating of between 1.5 and 4.0.

21. (Currently Amended) The drapery of Claim ~~[[18]]~~ 33 wherein said light impermeable metalized film is metalized with a metal having a thickness of between .0002 to .03 millimeters.

22. (Currently Amended) The drapery of Claim ~~[[18]]~~ 33 wherein said film is polypropylene.

AMENDMENT

- 3 -

23. (Previously Presented) A method for manufacturing a drapery lining, comprising, in combination, the steps of:

providing a film having a first side and a second side;

metalizing said first side of said film and said second side of said film;

coating a first layer of acrylic latex to said first side of said metalized film;

and

coating a second layer of acrylic latex to said second side of said metalized film, said combination of said metalized film, said first layer of acrylic latex and said second layer of acrylic latex providing a blackout and thermal drapery lining.

24. (Original) The method of Claim 23 further comprising the step of flocking said first layer of acrylic latex.

25. (Original) The method of Claim 23 further comprising the step of flocking said second layer of acrylic latex.

26. (Original) The method of Claim 23 further comprising the steps of:

providing a fabric; and

coupling said fabric to said first layer of acrylic latex.

Claims 27-28 (Cancelled)

AMENDMENT

- 4 -

29. (Previously Presented) A method for manufacturing a drapery, comprising, in combination, the steps of:

providing a film having a first side and a second side;

metalizing said first side of said film and said second side of said film for providing a light impermeable metalized film;

providing a first layer of fabric having a first side and a second side;

coupling said second side of said first layer of fabric to said first side of said light impermeable metalized film;

providing a second layer of fabric having a first side and a second side; and

coupling said first side of said second layer of fabric to said second side of said light impermeable metalized film, said combination of said light impermeable metalized film, said first layer of fabric and said second layer of fabric providing a blackout and thermal drapery.

30. (Previously Presented) A blackout and thermal drapery lining comprising, in combination:

a metalized film having a first side and a second side;

a first layer of acrylic latex having a first side and a second side, said second side of said first layer of acrylic latex is coated to said first side of said metalized film;

a second layer of acrylic latex having a first side and a second side, said first side of said second layer of acrylic latex is coated to said second side of said metalized film; and

a drapery fabric coupled to said first side of said first layer of acrylic latex.

31. (Previously Presented) A method for manufacturing a blackout and thermal drapery lining, comprising, in combination, the steps of:

providing a film having a first side and a second side;

AMENDMENT

- 5 -

metalizing said first side of said film and said second side of said film;  
coating a first layer of acrylic latex to said first side of said metalized film;  
coating a second layer of acrylic latex to said second side of said  
metalized film;  
providing a fabric; and  
coupling said fabric to said first layer of acrylic latex.

32. (New) The method for manufacturing a drapery according to Claim 29  
further comprising the steps of:

providing said light impermeable metalized film comprises  
polypropylene;

metalizing said light impermeable metalized film with a metal having a  
thickness of between .0002 to .03 millimeters; and

metalizing said light impermeable metalized film with aluminum having  
an optical rating of between 1.5 and 4.0.

33. (New) The drapery according to the method of Claim 29.
